# TEXAS INSTRUMENTS INC

TXN | ANNUAL through 2025-12-31 | As of 2026-10-11

## FINANCIAL PROFILE

USD | reported units, scaled for display

| | | | |
|---|---|---|---|
| Revenue | **17.68 bn** | Free cash flow | **2.60 bn** |
| Operating EBIT proxy | **6.02 bn** | Gross debt | **N/A** |
| EBITDA proxy | **N/A** | Gross leverage | **N/A** |
| Operating cash flow | **7.15 bn** | Interest coverage | **N/A** |

## SCREENING SCORE N/A | coverage 25% | possible 25.0-100.0

Uncalibrated screening heuristic; not a rating, default probability or investment recommendation.

EBITDA uses a D&A scope proxy. Debt includes verified disposal-group borrowings where reported; gaps stay N/A.

## CREDIT STRENGTHS

The issuer reports substantial operating cash flow that exceeds capital expenditures, producing positive free cash flow and suggesting an ability to fund operations and shareholder returns without relying on external financing, though the durability of this cash generation across semiconductor cycles remains an analyst inference rather than an established fact. [1]

A high current ratio indicates a large cushion of current assets over current liabilities, which may support short-term liquidity and debt servicing capacity, but the quality and composition of those current assets are not fully detailed in the provided evidence, so this should be treated as an inference rather than a confirmed strength. [1]

## KEY RISKS

The risk-factor passage states that the issuer has facilities in more than thirty countries and derives a majority of revenue from customers headquartered outside the United States, with significant China exposure, exposing it to tariffs, export restrictions, trade embargoes and geopolitical tensions that could disrupt supply chains or limit market access and materially affect financial results. [1]

Interest expense, debt balances, depreciation and amortization are missing from the provided data, so interest coverage, leverage and free cash flow to debt cannot be calculated; this absence of evidence prevents a full assessment of debt servicing capacity and should be treated as a material information gap rather than a sign of weak credit. [1]

## DEBT SERVICING CAPACITY

Operating cash flow and free cash flow are positive and substantial, which suggests the issuer can internally fund capital expenditures and potentially service debt, but without interest expense or debt balances the actual coverage and repayment capacity cannot be verified and must be treated as an analyst inference. [1]

Cash balances and a high current ratio provide a liquidity cushion that may support near-term obligations, yet the absence of debt and interest expense data means net debt, leverage and interest coverage remain unknown, so any conclusion about future repayment capacity is an inference and not an established fact. [1]

## OVERALL CREDIT VIEW

The issuer shows strong operating profitability and cash generation, with operating income and operating cash flow well above capital expenditures, supporting a favorable credit profile, but the lack of debt and interest expense data prevents a complete leverage and coverage assessment, so this view is an analyst inference based on available evidence. [1]

Geopolitical and trade risks, including significant China revenue exposure and potential tariffs or export restrictions, could pressure future cash flows and credit quality, while missing debt and interest metrics limit the ability to assess refinancing or repayment features; the credit outlook is therefore cautiously stable but subject to material information gaps. [1]
